Professional Experience

Software Engineer Nov 2025 – Present
EaseMyExpo *Remote*

- Built interactive 3D booth configurator features in React Three Fiber used to design exhibition stalls in the browser: surface, material and lighting customization, custom model import, and export to multiple 3D and document formats.
- Developed an AI image-to-3D pipeline that turns a guided brief (brand logos, guidelines) into multi-view booth images and editable 3D models, cutting concept turnaround from days to 20 minutes.
- Shipped backend APIs across 35+ route modules covering auth, payments, credits and refunds, shareable designs, and admin analytics, with 25+ automated test files.
- Built Leadline's FastAPI backend: OCR and Gemini-based lead extraction from floor plans, scraping, booth detection, and firmographic enrichment; reduced LLM/API costs by benchmarking cheaper models and caching lookups.

Software Development Intern Aug 2025 – Nov 2025
EaseMyExpo *Remote*

- Redesigned an OCR workflow using OpenCV and Tesseract, reducing manual corrections by 90%.
- Implemented preprocessing and validation layers to improve OCR reliability and reduce extraction failures.

Frontend Developer Jan 2024 – Jul 2025
Freelance *Remote*

- Built and deployed client-facing applications using React.js and Next.js with integrated payment workflows.
- Improved application performance through code splitting and lazy loading techniques.
- Delivered 5+ production applications across printing and event-management domains.

Projects

Minutes | *FastAPI, Next.js, Chrome Extension (MV3), Groq Whisper, Gemini, Cloudflare R2* live | github

- Built meeting-notes software for Hindi, English and Hinglish sales calls: a Manifest V3 extension captures tab audio through an offscreen document, so no bot joins the call.
- Built the pipeline: chunked Whisper transcription (about 90x real-time on a 6-minute call), then Gemini structured-JSON summaries (decisions, blockers, action items with owner, due date and priority).
- Implemented cited RAG Q&A per meeting and across all meetings using Gemini embeddings and cosine retrieval, returning timestamped citations in about 2 s (median); clicking a citation jumps the audio to that moment.
- Self-hosted on an Oracle Cloud VPS with Docker Compose and Caddy (auto HTTPS), with GitHub Actions CI checks and automated deploys.

Live Auctions | *NestJS, PostgreSQL, Redis, React Native, Agora* github

- Designed a real-time bidding architecture using Redis Pub/Sub and WebSockets to synchronize concurrent bids across clients, with transactional database operations to keep bids consistent under concurrency.
- Built a cross-platform React Native client for live bidding, with one-way live video broadcasting via the Agora SDK.

Technical Skills

Languages: TypeScript, JavaScript, Python
Backend: Node.js, NestJS, Hono, FastAPI, WebSockets
AI & ML: RAG, Gemini API, Whisper, OpenCV, Tesseract
Frontend: React.js, Next.js, React Three Fiber, React Native, Tailwind CSS
Databases & DevOps: PostgreSQL, MongoDB, Redis, Docker, GitHub Actions (CI/CD), Cloudflare R2, Oracle Cloud, Vercel

Education

Savitribai Phule Pune University Pune, India
Bachelor of Business Administration in Computer Applications (BBA-CA) *April 2025*
